

Layerscape® LX2162A, LX2122A, LX2082A Processors

LX2162A

Last Updated: Apr 11, 2024

The LX2162A (also known as “LX2-Lite”) processor squeezes the processing capability of the popular [LX2160A](#) device into a package that is nearly one quarter the size. It combines the low power of the 16nm FinFET process technology and sixteen Arm® Cortex®-A72 cores with data path acceleration optimized for L2/3 packet processing, security offload and robust traffic management and quality of service.

This advanced processor is suitable for small boards such as network interface cards, COM Express Type 7 modules, OCP3 mezzanine cards and custom daughter cards. It retains LX2160A's 16 Cortex-A72 cores, 50 Gbit/s security engine and 88 Gbit/s data compression engine. It has 12 SerDes lanes at up to 25 Gbit/s, which can support four 25 Gbit Ethernet and x8 PCIe Gen3 simultaneously, among many other combinations.

For Edge Computing, this processor offers outstanding computing performance with a powerful packet offload and Ethernet controllers. In one device you can have high-end, high-speed communications, with low-speed peripherals such as sensors and the computing power to process and act upon all received information.

Layerscape processors are part of NXP's EdgeVerse™ [edge computing](#) platform.
